

Problem Statement:

Create a simple Azure HTTP-triggered Function that accepts a parameter called `name` as input and returns a greeting message.

- Requirements:**
- If `name` is provided, return:
`Hello <name>, welcome to Azure Functions!`
 - If `name` is not provided, return a default message asking the user to provide a name.
 - The function must return a successful HTTP response.
 - Test the function using a web browser.

Create Function App (Flex Consumption) ...

1. REQUIRED: I recommend that you create your Azure AD B2C directory before creating your web application. publish a web application.

Project Details

Select a subscription to manage deployed resources and costs. Use resource groups like folders to organize and manage all your resources.

Subscription * Azure for Students

Resource Group * (New) demo-lms-RG

Create new

Instance Details

Function App name * demo-lms-function

-aggrgreqc3gucdq.centralindia-01.azurewebsites.net

☒ Secure unique default hostname on. [More about this update](#)

Region * Central India

Runtime stack * Python

Version * 3.13

Instance size * 512 MB

Zone redundancy

Instances of your app are distributed across availability zones for increased reliability. [More about zone redundancy](#)

Zone redundancy

☐ Enabled: Your Flex Consumption app will be zone redundant. This changes your app's required instance count per function or function group.

☒ Disabled: Your Flex Consumption app will not be zone redundant.

Storage

Select a storage account or create a new one. Accounts must support blobs, queue, and Table storage. [Learn more](#)

Storage account * (New) forfunctionlms

Create new

You can configure networking on new storage accounts when you enable virtual network integration and configure outbound access networking on your function app.

Diagnostic Settings

Configure diagnostic settings to enable data monitoring for your storage account. [Learn more](#)

Blob service diagnostic settings

☒ Configure later (Recommended for custom controls) Select this option for control over log destinations, retention policies, and specific logs and metrics.

☐ Configure now (Recommended for basic controls) Select to configure Azure Log Analytics with storage, write logs, and transaction metrics for the blob service. You can still modify these settings later.

Programming Model

v2 Programming Model

Use a template to create a function. Triggers describe the type of events that invoke your functions. [Learn more](#)

Search

Name	Trigger
HTTP trigger	A function that will be run whenever it receives an HTTP request, responding based on data in the body or query string
Timer Trigger	A function that will be run on a specified schedule
Queue trigger	A function that will be run whenever a message is added to a specified Azure Storage queue
ServiceBus Queue trigger	A function that will be run whenever a message is added to a specified Service Bus queue
ServiceBus Topic trigger	A function that will be run whenever a message is added to the specified Service Bus topic
Blob trigger	A function that will be run whenever a blob is added to a specified container
Blob trigger (using EventGrid source)	A function that will be run whenever a blob is added to a specified container using Event Grid
EventHub trigger	A function that will be run whenever an event hub receives a new event
CosmosDB trigger	A function that will be run whenever documents change in a document collection
Dapr Publish Output Binding	A function that will publish message on a topic to message broker using Dapr.
Dapr Service Invocation Trigger	A function that will be invoked by other app or functions using Dapr.
Dapr Topic Trigger	A function that will be invoked when a message is received on a subscribed topic in message broker using Dapr.
Durable Functions Entity Trigger	A function that manages the state of an entity in Durable Functions.
