

Azure Blob Storage Lifecycle Management offers a rule-based policy that you can use to transition blob data to the appropriate access tiers or to expire data at the end of its lifecycle. By defining these policies, you can automate the movement of blobs from Hot to Cool, Cold, or Archive tiers based on when the data was last modified or accessed, significantly optimizing storage costs and performance.

Update a rule

Details

Base blobs

Lifecycle management uses your rules to automatically move blobs to cooler tiers or to delete them. If you create multiple rules, the associated actions must be implemented in tier order (from hot to cool storage, then archive, then deletion).
