

- Create an external data source in Azure Synapse Analytics to connect to an Azure Data Lake Storage (ADLS) Gen2 account using SQL.
- Define an external file format for CSV files stored in ADLS, specifying the delimiter and other relevant format properties (e.g., field terminator, string delimiter).
- Create an external table in Synapse referencing a specific CSV file stored in ADLS. Use the external data source and file format you defined in the previous tasks.

Terms

By clicking Create, I (a) agree to the legal terms and privacy statement(s) associated with the Marketplace offering(s) listed above; (b) authorize Microsoft to bill my current payment method for the fees associated with the offering(s), with the same billing frequency as my Azure subscription; and (c) agree that Microsoft may share my contact, usage and transactional information with the provider(s) of the offering(s) for support, billing and other transactional activities. Microsoft does not provide rights for third-party offerings. For additional details see [Azure Marketplace Terms](#).

Basics

Subscription

Azure for Students

Resource group

syn-RG

Region

Central India

Workspace name

(new) firstmodule

Data Lake Storage Gen2 account

https://forpracms.dfs.core.windows.net

Data Lake Storage Gen2 file system

(new) data

Managed resource group

managed-syn-RG

Role assignments

The Storage Blob Data Contributor role will be assigned on the specified Data Lake Storage Gen2 account to both the workspace managed identity and the current user.

Security

Authentication method

Use both local and Microsoft Entra ID authentication
