

Create datasets for both the source (CSV files in ADLS) and the destination (tables in SQL Server).

The image consists of two screenshots from the Microsoft Azure Data Factory portal, illustrating the steps to create a new dataset.

Top Screenshot: New dataset

- The left sidebar shows the 'Factory Resources' tree with 'Pipelines' expanded, showing a pipeline named 'practical2ADF'.
- The 'Activities' pane shows a 'COPY' activity named 'copy data'.
- The 'Source dataset' dropdown is set to 'Select...'.
- The 'New dataset' dialog is open on the right. It shows a grid of data stores. An arrow points to 'Azure Data Lake Storage Gen2'.
- The 'File path' field is set to 'source / Directory / Sales_1.csv'.
- The 'First row as header' checkbox is checked.
- The 'Import schema' section has 'From connection/store' selected.
- The 'Advanced' section is expanded.

Bottom Screenshot: Set properties

- The 'Set properties' dialog is open on the right. It shows the 'Name' field set to 'DelimitedText1'.
- The 'Linked service' dropdown is set to 'source data lake'.
- The 'File path' field is set to 'source / Directory / Sales_1.csv'.
- The 'First row as header' checkbox is checked.
- The 'Import schema' section has 'From connection/store' selected.
- The 'Advanced' section is expanded.
