

Create Linked Services to connect Azure Data Factory with Azure Data Lake Storage (ADLS) and Microsoft SQL Server database. Configure necessary authentication details (e.g., **Azure Key Vault** for secrets).

The image displays two screenshots of the Microsoft Azure Data Factory portal, illustrating the process of creating linked services.

Top Screenshot: Edit linked service (source data lake)

- Left Panel:** Shows the navigation menu with 'Linked services' selected under the 'Connections' section.
- Center Panel:** Displays the 'Linked services' list with one item: 'source data lake' of type 'Azure Data Lake Storage Gen2'.
- Right Panel:** Shows the 'Edit linked service' configuration for 'source data lake'.
 - Name:** source data lake
 - Description:** (empty)
 - Connect via integration runtime:** AutoResolveIntegrationRuntime
 - Authentication type:** Account key
 - Account selection method:** From Azure subscription (selected). Azure subscription: Azure for Students (347950b0-bcad-4cc0-bfaa-78093bc0fea6).
 - Storage account name:** fordemo
 - Test connection:** To linked service (selected).
 - Annotations:** (empty)
 - Parameters:** (empty)
 - Advanced:** (empty)

Bottom Screenshot: New linked service (Azure SQL Database)

- Left Panel:** Similar to the top screenshot, with 'Linked services' selected.
- Center Panel:** Shows the 'Linked services' list with one item: 'source data lake' of type 'Azure Data Lake Storage Gen2'.
- Right Panel:** Shows the 'New linked service' configuration for 'Azure SQL Database'.
 - Name:** AzureSqlDatabase1
 - Description:** (empty)
 - Connect via integration runtime:** AutoResolveIntegrationRuntime
 - Version:** 2.0 (Recommended)
 - Account selection method:** From Azure subscription (selected). Azure subscription: Azure for Students (347950b0-bcad-4cc0-bfaa-78093bc0fea6).
 - Server name:** prac2
 - Database name:** practical2
 - Authentication type:** SQL authentication
 - User name:** admin123
 - Password:** (masked)
 - AKV linked service:** AzureKeyVault1
 - Secret name:** dbkey
