1. Create an Azure Key Vault

Microsoft Azure

Search resources, services, and docs (G+)

Copilot

Home

Create a key vault

Project details

Select the subscription to manage deployed resources and costs. Use resource groups like folders to organize and manage all your resources.

Subscription * Azure for Students

Resource group * (New) key-lms

Instance details

Key vault name * key-vault-for-lms

Region * Central India

Pricing tier * Standard

Recovery options

Soft delete protection will automatically be enabled on this key vault. This feature allows you to recover or permanently delete a key vault and secrets for the duration of the retention period. This protection applies to the key vault and the secrets stored within the key vault.

To enforce a mandatory retention period and prevent the permanent deletion of key vaults or secrets prior to the retention period elapsing, you can turn on purge protection. When purge protection is enabled, secrets cannot be purged by users or by Microsoft.

Soft-delete Enabled

Days to retain deleted vaults * 90

Purge protection

☒ Disable purge protection (allow key vault and objects to be purged during retention period)

☐ Enable purge protection (enforce a mandatory retention period for deleted vaults and vault objects)

Configure data plane access for this key vault

To access a key vault in data plane, all callers (users or applications) must have proper authentication and authorization. Authentication establishes the identity of the caller. Authorization determines which operations the caller can execute. [Learn more](#)

Permission model

Grant data plane access by using a [Azure RBAC](#) or [Key Vault access policy](#)

☐ Azure role-based access control (recommended)

☒ Vault access policy

Resource access

☐ Azure Virtual Machines for deployment

☐ Azure Resource Manager for template deployment

☐ Azure Disk Encryption for volume encryption

Access policies

Access policies enable you to have fine grained control over access to vault items. [Learn more](#)

Review + create

Create a logic app, which lets you group workflows as a logical unit for easier management, deployment and sharing of resources. Workflows let you connect your business-critical apps and services with Azure Logic Apps, automating your workflows without writing a single line of code.

Project Details

Select a subscription to manage deployed resources and costs. Use resource groups like folders to organize and manage all your resources.

Subscription * Azure for Students

Resource Group * key-lms
[Create new](#)

Instance Details

Logic App name * retrieve-secret-lms

Region * Central India

Enable log analytics * ☐ Yes ☒ No

⚠

There are no log analytics workspace resources in the selected subscription. In order to enable log analytics, either create a new log analytics workspace resource or switch to a subscription which already has one.

Workflow Type *
☒ **Stateful**
☐ **Conversational Agents (Preview)**: Stateful workflows that use AI agents to complete tasks through chat interactions or other agents.
☐ **Autonomous Agents (Preview)**: Stateful workflows that use AI agents to complete tasks and can start from any trigger, such as an event, schedule, or API call.

4. Set Access Policies for the Key Vault. Give read access to a user/group.

The screenshot shows the Microsoft Azure portal interface. The main content area displays the 'Access policies' for the Key Vault 'Ims-key-vault-prac'. A table lists three users: 'DEMO', 'DEMO', and 'Tushar Kolte'. The 'DEMO' user is selected. On the right, the 'Edit DEMO' permissions page is open, showing three sections: 'Key permissions', 'Secret permissions', and 'Certificate permissions'. In the 'Secret permissions' section, 'Select all' is checked. The 'Certificate permissions' section is also visible. The bottom of the page shows a 'Previous' button and a 'Next' button.

Access policies table:

Name	Email
DEMO	demouser@kolhetusharoutlook.com
DEMO	demouser@kolhetusharoutlook.com
Tushar Kolte	kolhetushar_outlook.com#EXT#

Permissions for DEMO:

- Key permissions:** Select all, Get, List, Update, Create, Import, Delete, Recover, Backup, Restore.
- Secret permissions:** Select all, Get, List, Set, Delete, Recover, Backup, Restore, Privileged Secret Operations, Purge.
- Certificate permissions:** Select all, Get, List, Update, Create, Import, Delete, Recover, Backup, Restore, Manage Contacts, Manage Certificate Authorities, Get Certificate Authorities, List Certificate Authorities, Set Certificate Authorities, Delete Certificate Authorities, Privileged Certificate Operations, Select all, Purge.
