

Enabled the Event grid From the resource provider.

The screenshot shows the 'Resource providers' page in the Azure portal. The search filter is 'event'. The table below shows the status of two providers:

Provider ID	Status	Registration Policy
Microsoft.EventGrid	Registered	RegistrationRequired
Microsoft.EventHub	NotRegistered	RegistrationRequired

A notification on the right indicates that the 'Subscription Registering Resource Provider' for 'Microsoft.EventGrid' was successfully registered.

Created a storage account.

The screenshot shows the 'Create a storage account' wizard in the Azure portal, specifically the 'Review + create' step. The configuration details are as follows:

Section	Field	Value
Basics	Subscription	Azure for Students
	Resource group	demo-lms-eventgrid
	Location	Central India
	Storage account name	demoeventgridlms
	Preferred storage type	Standard
Basics	Performance	Standard
	Replication	Read-access geo-redundant storage (RA-GRS)
Advanced	Enable hierarchical namespace	Disabled
	Enable SFTP	Disabled
	Enable network file system v3	Disabled
	Allow cross-tenant replication	Disabled
	Access tier	Hot
	Managed identity for SMB	Disabled
Security	Secure transfer	Enabled
	Blob anonymous access	Disabled
	Allow storage account key access	Enabled
	Default to Microsoft Entra authorization in the Azure portal	Disabled
	Minimum TLS version	Version 1.2

The 'Create' button is highlighted in blue at the bottom of the wizard.

Created an event grid resource.

The screenshot displays the Microsoft Azure portal interface. At the top, the header includes the Microsoft Azure logo, a search bar, and a Copilot button. The main content area is titled "demoeventgridlms_1775195139634 | Overview". Below the title, there is a deployment summary section with a green checkmark icon and the text "Your deployment is complete". This section lists the following details: Deployment name: demoeventgridlms_1775195139634, Subscription: Azure for Students, Resource group: demo-lms-eventgrid, Start time: 4/3/2026, 11:16:03 AM, and Correlation ID: abc1087a-0fd9-4cb3-8234-91cad8390108. Below the summary, there are expandable sections for "Deployment details" and "Next steps". The "Next steps" section contains a blue button labeled "Go to resource". Further down, there are three promotional cards: "Cost management" with a dollar sign icon, "Microsoft Defender for Cloud" with a shield icon, and "Free Microsoft tutorials" with a book icon. Each card includes a brief description and a link to learn more. At the bottom of the page, there is a footer with the text "Add or remove favorites by pressing Ctrl+Shift+F".

Inside the logic App designer created a trigger that would detect the uploaded file in the BLOB.

The screenshot displays the Microsoft Azure Logic App Designer interface. The top navigation bar includes the Microsoft Azure logo, a search bar, and the Copilot icon. The breadcrumb trail shows the path: Home > Resource Manager | Resource groups > demo-lms-eventgrid > new-event-lms.

The main header area shows the resource name 'new-event-lms' and the title 'Logic app designer'. A search bar is located below the header. The left sidebar contains a list of navigation options: Overview, Activity log, Access control (IAM), Tags, Diagnose and solve problems, Resource visualizer, Development Tools, Logic app designer (selected), Logic app code view, Logic app templates, Run history, Chat (Preview), Versions, API connections, Quick start guides, Settings, Monitoring, Automation, and Help.

The main workspace displays a trigger configuration for 'When a resource event occurs'. The trigger is configured with the following parameters:

- Resource Type ***: Microsoft.Storage.StorageAccounts
- Subscription ***: Azure for Students
- Resource Name ***: demoeventgridlms
- Event Type**: A list of event types is shown, with 'Microsoft.Storage.BlobCreated' selected. An arrow points to this selection.

Below the event type list, there is a section for 'Parameters' with a search bar and a 'Show all' button. At the bottom, there is a connection status bar indicating the connection to 'live.com#koltetushar@outlook.com' and a 'Change connection' link.

Then uploaded the file in the BLOB and checked the logs.

Created a filter in the Logic app so that it would only detect a particular container in a BLOB.

The screenshot displays the Microsoft Azure Logic app designer interface. The top navigation bar includes the Microsoft Azure logo, a search bar, and a Copilot button. The breadcrumb trail shows the path: Home > Resource Manager | Resource groups > demo-lms-eventgrid > new-event-lms. The main header area shows the logic app name 'new-event-lms' and the title 'Logic app designer'. A notification banner at the top right states 'Successfully saved workflow' with a 'Try it now' button. Below the header, a search bar and a banner for a new Logic Apps experience are visible. The left sidebar contains a navigation menu with options like Overview, Activity log, Access control (IAM), Tags, Diagnose and solve problems, Resource visualizer, Development Tools, Logic app designer (selected), Logic app code view, Logic app templates, Run history, Chat (Preview), Versions, API connections, Quick start guides, Settings, Monitoring, Automation, and Help. The main workspace shows a workflow titled 'When a resource event occurs'. The 'Parameters' tab is active, showing a dropdown for 'Microsoft.Storage.StorageAccounts'. Below this, the 'Subscription' is set to 'Azure for Students' and the 'Resource Name' is 'demoeventgridlms'. The 'Event Type' section contains a list of event types, with 'Microsoft.Storage.BlobCreated' selected. A filter is applied to the event types, showing '1 of 3' results. The filter is a text box containing the path 'services/default/containers/demo2/'. A mouse cursor is pointing at the filter text box. At the bottom, a status bar indicates the connection to 'live.com#koltetushar@outlook.com' with a 'Change connection' link.

Created a logic app to send Data.

The screenshot displays the Microsoft Azure Logic App Designer interface. The top navigation bar includes the Microsoft Azure logo, a search bar, and the Copilot icon. The breadcrumb trail shows 'Home > Logic apps > send-events-lms'. The main header area displays the logic app name 'send-events-lms | Logic app designer' along with a star icon and a menu icon. A notification banner at the top right states 'Successfully ran the trigger' with a close button. Below the header, a toolbar contains buttons for 'Run', 'Save', 'Discard', 'Parameters', 'Code view', and a menu icon. The left sidebar lists various tools and settings, with 'Logic app designer' currently selected. The central workspace shows a logic app flowchart with a trigger 'When an HTTP request is received' connected to an action 'Publish Event'. A vertical toolbar on the left side of the workspace contains icons for adding, removing, and searching for actions. At the bottom left, a note indicates 'Add or remove favorites by pressing Ctrl+Shift+F'.
