

1. Create a group named "Readers" in **Azure Active Directory**.
2. Add a user as a member of the "Readers" group.

The screenshot shows the Microsoft Azure portal interface. On the left, the 'New Group' form is visible with the following fields: Group type (Security), Group name (Readers), Group description (Enter a description for the group), and Membership type (Assigned). On the right, the 'Add members' dialog is open, displaying a list of 94 results found. The 'demo' user is selected, and the 'Selected (1)' list on the right shows 'demo' with the email 'demo@kolletusharoutlook.onmicrosoft.co...'. A blue arrow points from the 'Add members' button to the 'demo' user in the list.

3. Assign the "Reader" role to the "Readers" group, granting them read-only access to specific resources.

The screenshot shows the 'Add role assignment' page in the Microsoft Azure portal. The 'Selected role' is 'Reader'. The 'Assign access to' section has 'User, group, or service principal' selected. The 'Members' section shows a table with the following data:

Name	Object ID	Type
Readers	4eeca1b-607a-416f-af31-8777024626a7	Group

A blue arrow points to the 'Readers' group in the table. The 'Description' field is optional. At the bottom, there are buttons for 'Review & assign', 'Previous', and 'Next'. A blue arrow points from the 'Review & assign' button to the 'Review + assign' tab.
