

Create a dedicated SQL pool table in Synapse and load data from a CSV file in ADLS into this table using PolyBase.

The image shows two screenshots from the Microsoft Azure portal. The top screenshot is the 'Create Synapse workspace' wizard, and the bottom screenshot is the 'New dedicated SQL pool' configuration page.

Top Screenshot: Create Synapse workspace

The page shows the 'Review + create' step of the wizard. A green banner at the top indicates 'Validation succeeded'. The 'Product Details' section shows 'Azure Synapse Analytics workspace by Microsoft' with a 'Serverless SQL est. cost/TB' of '5.00 USD'. The 'Terms' section contains legal disclaimers. The 'Basics' section lists configuration details:

Subscription	Azure for Students
Resource group	syn-RG
Region	Central India
Workspace name	(new) firstmodule
Data Lake Storage Gen2 account	https://forpracims.dfs.core.windows.net
Data Lake Storage Gen2 file system	(new) data
Managed resource group	managed-syn-RG
Role assignments	The Storage Blob Data Contributor role will be assigned on the specified Data Lake Storage Gen2 account to both the workspace managed identity and the current user.

The 'Security' section shows 'Authentication method' as 'Use both local and Microsoft Entra ID authentication'. At the bottom, there are 'Create', '< Previous', 'Next >', and 'Download a template for automation' buttons.

Bottom Screenshot: New dedicated SQL pool

This page shows the configuration for a new dedicated SQL pool. The 'Basics' tab is active. The 'Dedicated SQL pool details' section includes:

- Dedicated SQL pool name ***: trialpool
- Performance level**: A slider set to 'DW100c'.
- Estimated price**: Est. cost per hour 1.69 USD. A link for 'View pricing details' is provided.

At the bottom, there are 'Review + create', 'Next: Additional settings >', and 'Cancel' buttons. An 'Activate Windows' watermark is visible in the bottom right corner of both screenshots.
